eGovernment technology is transforming regional governance and ushering in innovation in the back office. Since 1995, the eGovernment and eServices forum has grown to become one of the most important events in the calendar of eGovernment technology and management professionals, and it is undoubtedly the most comprehensive event of its kind in the industry.

With the aim of transforming eGovernment Services in the GCC region, the event focuses on how such services impact and benefit citizens and businesses by highlighting regional developments in eGovernment and presenting global case studies on successful practices.

The forum brings together experts from various countries, key government representatives, industry and academia, providing delegates with the ultimate platform to connect with industry experts at networking, panel sessions and evening activities.

During the event, key stakeholders in eGovernment implementation - government leaders, eGovernment agencies, and service providers - share thoughts on successes, failures and opportunities; giving delegates the chance to demonstrate their initiatives; take feedback from the community; and learn about processes, technologies and solutions that address their concerns.

It is a platform for knowledge sharing and interaction enabling eGovernment professionals to gain a better perspective on eGovernment implementation and management via global case studies.
